

Is Your Wireless LED Par Light Stuck in Standby Mode?

It may actually just be in Slave mode.

Every time you turn your light on, the previous setting is gone, and the screen says:

Stby

Do the following steps within ten seconds. If you wait too long, the light will exit the menu, and you will have to start over at step 1.

Step 1: Press **MENU 3** times

It should say:

SLNd

Step 2: Press **ENTER**

It should now be flashing:

SLAw

Step 3: Press **UP**

It should now be flashing:

NASt

Step 4: Press **ENTER**

It should say:

SLNd

Now you can set your light manually as before.
